## Type-specimens of Ceratopogonidae (Insecta: Diptera) in the collection of the Museo de La Plata, Argentina

Pablo I. Marino, Gustavo R. Spinelli & Carla G. Cazorla

División Entomología, Museo de La Plata, Paseo del Bosque s/n, 1900, La Plata, Argentina.  
E-mail: spinelli@museo.fcnym.unlp.edu.ar

**RESUMEN.** Se presenta una lista de los 1.668 ejemplares-tipo (997 montados en preparaciones microscópicas, 659 preservados en alcohol 70% y 12 pinchados en alfiler), incluyendo holotipos, alotipos, otros paratipos, neotipos y paralectotipos de Diptera Ceratopogonidae depositados en la colección de la División Entomología del Museo de La Plata. Ellos pertenecen a 264 especies nominales, actualmente distribuidas en los siguientes 35 géneros: *Leptoconops* (Leptoconopinae), *Atrichopogon* y *Forcipomyia* (Forcipomyiinae), *Dasyhelea* (Dasyheleinae), *Culicoides* (Ceratopogoninae, Culicoidini), *Alluaudomyia*, *Baeodasymyia*, *Baeohelea*, *Bahiahelea*, *Borkenthelea*, *Brachypogon*, *Diaphanobezzia*, *Downshelea*, *Echinohelea*, *Fittkauhelea*, *Heteroceratopogon*, *Macrurohelea*, *Monohelea*, *Notiohelea* y *Parabezzia* (Ceratopogoninae, Ceratopogonini), *Clinohelea*, *Heteromyia* y *Pellucidomyia* (Ceratopogoninae, Heteromyiini), *Austrosphaeromias*, *Lanehelea*, *Mallochohelea*, *Neobezzia* y *Sphaerohelea* (Ceratopogoninae, Sphaeromiini), *Amerohelea*, *Bezzia*, *Clastrieromyia*, *Palpomyia* y *Phaenobezzia* (Ceratopogoninae, Palpomyiini), *Paryphoconus* y *Stenoxenus* (Ceratopogoninae, Stenoxenini). Noventa de los tipos mencionados, que representan un 5.40 % del total, son portadores de nombre (88 holotipos y 2 neotipos). Se ofrecen para cada ejemplar, datos completos sobre la categoría del tipo, estado de desarrollo, sexo, datos de recolección y preservación, así como información referida a nombres originales y válidos, posición sistemática, combinaciones y publicación original para cada taxón. Se propone a *Forcipomyia taragui* Marino & Spinelli como un nombre nuevo para *Forcipomyia guarani* Marino & Spinelli 1999, non *Forcipomyia guarani* Ronderos & Spinelli 1999.

**Palabras clave.** Ceratopogonidae, ejemplares-tipo, División Entomología, Museo de La Plata, Argentina.

**ABSTRACT.** One thousand six hundred and sixty eight type-specimens (997 slide mounted, 659 preserved in 70% alcohol and 12 pinned specimens), including holotypes, allotypes, other paratypes, neotypes and paralectotypes of Diptera

Ceratopogonidae deposited in the collection of the Division Entomology of the Museo de La Plata are listed. They belong to 264 nominal species, and are currently distributed in the following 35 genera: *Leptoconops* (Leptoconopinae), *Atrichopogon* and *Forcipomyia* (Forcipomyiinae), *Dasyhelea* (Dasyheleinae), *Culicoides* (Ceratopogoninae, Culicoidini), *Alluaudomyia*, *Baeodasomyia*, *Baeohelea*, *Bahiahelea*, *Borkenthelea*, *Brachypogon*, *Diaphanobezzia*, *Downshelea*, *Echinohelea*, *Fittkauhelea*, *Heteroceratopogon*, *Macrurohelea*, *Monohelea*, *Notiohelea* and *Parabezzia* (Ceratopogoninae, Ceratopogonini), *Clinohelea*, *Heteromyia* and *Pellucidomyia* (Ceratopogoninae, Heteromyiini), *Austrosphaeromias*, *Lanehelea*, *Mallochohelea*, *Neobezzia* and *Sphaerohelea* (Ceratopogoninae, Sphaeromiini), *Amerohelea*, *Bezzia*, *Clastrieromyia*, *Palpomyia* and *Phaenobezzia* (Ceratopogoninae, Palpomyiini), *Paryphoconus* and *Stenoxenus* (Ceratopogoninae, Stenoxenini). Ninety of the mentioned types, representing 5.40 % of the total number, are name-bearing types (88 holotypes and 2 neotypes). Complete data on category type, stage, sex, data collection and preservation are presented for each specimen, as well as information about original and valid names, systematic position, publication and combinations for each taxon. *Forcipomyia taragui* Marino & Spinelli is proposed as a new name for *Forcipomyia guarani* Marino & Spinelli 1999, non *Forcipomyia guarani* Ronderos & Spinelli 1999.

**Key words.** Ceratopogonidae, type-specimens, Division Entomology, Museo de La Plata, Argentina.

## Introduction

Insects of the family Ceratopogonidae (Diptera: Nematocera) are commonly known as “biting midges” in the English speaking countries, “maruim” in Brazil, “manta blanca” in Peru, “purrujas” in Costa Rica, and “polvorines” or “jejenes” in Argentina.

Borkent & Wirth (1997) in their World catalog for the family mentioned 5155 extant and 205 extinct species. Less than 100 species have been subsequently described.

The large collection deposited in the Division Entomology of the Museo de La Plata (more than 2 million specimens) lacked types of Ceratopogonidae until 1981, when Gustavo Spinelli and subsequent collaborators in the Division (María M. Ronderos and Pablo I. Marino) began working on the systematics of the family. As a result of their studies, types of many subsequently described species were deposited in the collection. The collection was greatly enriched by the generous donations by the late Willis W. Wirth of paratypes of many of the species described by him and co-workers, as well as by the personal collection of José P. Duret. In addition, the types of Ceratopogonidae formerly deposited in the collection of the Department of Sanitary Entomology of the Instituto Nacional de Microbiología “Dr. Carlos G. Malbrán”, were incorporated into the Museum collection after the death of Fiorello Cavalieri.

Due to the great value of type material for the proper assignment of scientific names, the International Code of Zoological Nomenclature (ICZN, 2000) recommends the publication of lists of the type-specimens by the Institutions housing type-specimens (ICZN, article 72, recommendation 72F.4).

This catalog includes the specific names published through 2001, from which types are deposited in the collection of the Division Entomology of the Museo de La Plata. For all specimen relevant information is provided from original publications and labels.

Paratype designations are specified in the ICZN in article 72.4.5 and also by the same articles that govern holotypes apply to them. These same articles also govern allotypes, which are paratypes of the opposite sex of the holotype that are designated by the original author(s) (article 72, recommendation 72A). Type-locality is the site where the holotype was collected as stated in the

original publication (article 76, recommendation 76A).

Except as noted, all specimens are slide mounted in Canada balsam.

### Organization

The listed species are alphabetically ordered based on the specific epithet. The following information from the original publication and labels is provided for each specimen:

- Taxon name: the specific epithet is identical to the one stated in the original description. After the specific epithet the original generic name is indicated in italics, between brackets.
- Original publication: author/s, year, complete name of journal/book, volume, page, and country of the type-locality.
- Nomenclatural modifications, and synonymy if the species is currently considered as a junior synonym, including pertinent bibliographic reference/s.
- Type-category: holotype, allotype, neotype, paratype or paralectotype. For the last two categories, the number of specimens discriminating sexes is stated.
- Collection number: as usual in the collection of the Department of Entomology of the Museo de La Plata, all specimens from a series bear the same number, and each one receives an additional number separated by a slash (/).
- Collecting data: include country, province, department or state, locality, collecting date and name of collector(s). All this information corresponds with label data.
- Remarks: any additional information on the specimens.

### List of types

*acinacis* [*Forcipomyia*] Wirth & Spinelli 1993. Proceedings of the Entomological Society of Washington 95: 615. United States of America (Maryland).

- Paratype male, MLP n° 2592/2. COLOMBIA, Valle, río Raposo, VIII-1964, V. Lee.

- Paratypes, females (2), MLP n° 2592/3-4. COLOMBIA, Valle, río Raposo, 28-VII-1964, V. Lee

*warmkei* [*Atrichopogon*] Wirth 1956. Proceedings of the Entomological Society of Washington 58: 243. Puerto Rico (USA).

- Paratype female, MLP n° 2733. PUERTO RICO, Mayaguez, 1/9-IV-1953, H. Warmke.

*weemsi* [*Forcipomyia*] Wirth & Spinelli 1993. Insecta Mundi 6: 123. United States of America (Florida).

- Paratype male, MLP n° 2908/1. USA, Florida, Alachua Co., Gainesville, Chantilly Acres, VI-1967, F. Blanton.

- Paratype female, MLP n° 2908/2. USA, Florida, Alachua Co., Gainesville, Chantilly Acres, 5-VII-1967, F. Blanton.

- Paratypes, females (2), MLP n° 2908/3-4. USA, Florida, Alachua Co., Gainesville, Chantilly Acres, VIII-1967, F. Blanton.

- Paratype male, MLP n° 2908/5. USA, Florida, Alachua Co., Gainesville, Chantilly Acres, 2-VII-1967, F. Blanton.

- Paratype male, MLP n° 2908/6. USA, South Carolina, Charleston, IX-1969, W. Ezell.

*wernerii* [*Forcipomyia*] Wirth & Spinelli 1993. Proceedings of the Entomological Society of Washington 95: 632. Mexico.

- Paratypes (4): 2 males, 2 females, MLP n° 2411/1-4. MEXICO, Sonora, 5 mi W Alamos, 14-VIII-1959, Werner – Nutting.

*williamsi* [*Dasyhelea*] Wirth & Waugh 1976. Studia Entomologica 19: 228. Trinidad and Tobago.

- Paratype male, MLP n° 2715. BRAZIL, Bahia, Itabuna, 1973, J. Winder, reared, rotting cacao pods.

*williamsi* [*Forcipomyia*] Marino & Spinelli 1999. Iheringia, série Zoologia 86: 5. Argentina.

- Holotype female, MLP n° 2412/1. ARGENTINA, Buenos Aires, Berisso, Los Talas, 29-XII-1987, G. Spinelli.

- Allotype male, MLP n° 2412/2. ARGENTINA, Buenos Aires, isla Martín García, 18/20-XI-1996, M. Coscarón.

- Paratypes, males (3), MLP n° 2412/3-5. ARGENTINA, Buenos Aires, isla Martín García, 18/20-XI-1996, M. Coscarón.

- Paratypes, females (4), MLP n° 2412/6-9. ARGENTINA, Buenos Aires, Berisso, Los Talas, 29-XII-1987, G. Spinelli.

- Paratype female, MLP n° 2412/10. ARGENTINA, Buenos Aires, Punta Lara, 7-IV-1986, G. Spinelli.

*winderi* [*Dasyhelea*] Wirth & Waugh 1976. Studia Entomologica 19: 233. Brazil.

- Paratype female, MLP n° 2717. BRAZIL, Bahia, Itabuna, 1970, J. Winder.

- wirthi* [*Austrosphaeromyia*] Spinelli 1997. *Memoirs of the Entomological Society of Washington* 18: 228. Argentina.  
- Holotype female, MLP n° 2844. ARGENTINA, Río Negro, ruta nac. n° 231 y arroyo Ragintuco, 2-II-1986, G. Spinelli.
- wirthi* [*Brachypogon*] Spinelli 1990. *Revista Brasileira de Entomologia* 34: 753. Argentina.  
- Holotype female, MLP n° 2818. ARGENTINA, La Rioja, Pozo de Piedra, 4 km E Chepes, 7-I-1980, R. Woodruff – H. Cordo.
- wirthi* [*Macrurohelea*] Spinelli & Grogan 1984. *Proceedings of the Entomological Society of Washington* 86: 965. Argentina.  
- Holotype female, MLP n° 3957. ARGENTINA, Neuquen, San Martín de los Andes, 1400 m, 15-IV-1982, M. Gentili.
- wirthi* [*Neobezzia*] Spinelli & Felipe-Bauer 1990. *Memorias do Instituto Oswaldo Cruz* 85: 88. Argentina.  
- Holotype female, with pupal exuvia, MLP n° 2851/1. ARGENTINA, Corrientes, Monte Caseros, 13-I-1987, L. Biestro.  
- Allotype male, with pupal exuvia, MLP n° 2851/2. ARGENTINA, Corrientes, Monte Caseros, 13-I-1987, L. Biestro.  
- Paratype female, with pupal exuviae, MLP n° 2851/3. ARGENTINA, Corrientes, Monte Caseros, 22-X-1987, G. Spinelli.
- wokei* [*Heteromyia*] Wirth & Grogan 1977. *The Florida Entomologist* 60: 181. Nicaragua.  
- Paratype female, MLP n° 2842. NICARAGUA, Bluefields, 25-VIII-1943, P. Woke.
- wygodzinskyi* [*Forcipomyia*] Cavalieri 1961. *Revista de la Sociedad Entomológica Argentina* 23: 17. Argentina.  
- Holotype female, MLP n° 2413/A-B (2 slides). ARGENTINA, Tierra del Fuego, Ushuaia, El Tristán, 26-I-1960, P. Wygodzinsky.
- xanifer* [*Culicoides*] Wirth & Blanton 1968. *The Florida Entomologist* 51: 210. Panamá.  
- Paratypes (2): 1 male, 1 female, MLP n° 2593/1-2. PANAMA, Almirante, Bocas del Toro, 29-IV-1953, F. Blanton.  
- Paratypes, females (2), MLP n° 2593/3-4. PANAMA, Almirante, Bocas del Toro, 9-XII-1952, F. Blanton.
- yamana* [*Forcipomyia*] Marino & Spinelli 2001. *Revista de la Sociedad Entomológica Argentina* 60 (1-4): 118. Chile.  
- Holotype female, MLP n° 2901. CHILE, Antártica Chilena, Deceit island, 55° 50' S 67° 06' W, 19/27-XI-1982, D. Lanfranco.
- yamana* [*Macrurohelea*] Spinelli & Grogan 1999. *Proceedings of the Entomological Society of Washington* 101: 710. Argentina.  
- Holotype male, MLP n° 2832/1. ARGENTINA, Tierra del Fuego, Ushuaia, bahía Lapataia, 24/28-II-1997, P. Posadas.  
- Allotype female, MLP n° 2832/2. ARGENTINA, Tierra del Fuego, Ushuaia, arroyo Los Castores, bahía Lapataia, 1-III-1993, G. Spinelli.  
- Paratype female, MLP n° 2832/3. ARGENTINA, Tierra del Fuego, Ushuaia, arroyo Los Castores, bahía Lapataia, 1-III-1993, G. Spinelli.

*youngi* [*Culicoides*] Wirth & Barreto. 1978. Journal of Medical Entomology 14: 562. Colombia.  
- Paratype female, MLP n° 2594/1. COLOMBIA, Valle, río Raposo, 1-VII-1964, V. Lee.  
- Paratype female, MLP n° 2594/2. COLOMBIA, Valle, río Raposo, V-1965, V. Lee.

*youngi* [*Forcipomyia*] Wirth 1982. Proceedings of the Entomological Society of Washington 84: 579. Panamá.  
- Paratypes (2): 1 male, 1 female, MLP n° 2414/1-2. PANAMA, Canal Zone, Gamboa, Pipeline Road, VII-1967, W. Wirth.  
- Paratype female, MLP n° 2414/3. ECUADOR, Quevedo, Pichilingue INIAP, IV-1978, J. Mendoza.  
- Paratype male, MLP n° 2414/4. ECUADOR, Quevedo, Pichilingue INIAP, V-1978, J. Mendoza.
