

## **Supplementary material**

### **Urban geochemistry and potential human health risks in the Metropolitan Area of Buenos Aires: PAHs and PCBs in soil, street dust, and bulk deposition**

Cappelletti, N., Astoviza, M., Morrone, M., Tatone, L.

**Total Number of Pages: 13**

**Total Number of Tables: 8**

#### **Summary**

Gas chromatographic conditions	Pag. S2
Table 1S Recoveries of certified reference material (NIST 1944) for PAHs.....	Pag. S3
Table 2S Recoveries of certified reference material (NIST 1944) for PCB congeners. ....	Pag. S4
Table 3S. Individual PAHs concentrations ( $\text{ng g}^{-1}$ ) in soil, street dust and bulk deposition of the Metropolitan Area of Buenos Aires (MABA).....	Pag. S5
Table 4S. Individual PCB concentrations ( $\text{ng g}^{-1}$ ) in soil, street dust and bulk deposition of the Metropolitan Area of Buenos Aires (MABA).....	Pag. S6
Table 5S. PAH and PCB concentrations ( $\text{ng g}^{-1}$ ) in soil, street dust and bulk deposition of the Metropolitan Area of Buenos Aires (MABA) compared with other urban sites.....	Pag. S7
Table 6S. Pearson's correlation coefficient for PAHs, concentrations, organic (OM) and clay content of soils and street dust. ....	Pag. S8
Table 7S. Pearson's correlation coefficient for PCBs, concentrations, organic (OM) and clay content of soils and street dust.....	Pag. S9
Table 8S. Exposure point concentration term (C) and doses (D), hazard quotient (HQ), hazard index (HI) and carcinogenic risk (ILCR) for each compound and exposure pathway.....	Pag. S10
References .....	Pag. S13

### **Gas chromatographic conditions**

The PCBs in the first eluate were analyzed by an Agilent 7890 gas chromatography equipped with a DB-5 capillary column (30 m 0.32 mm 0.25 mm) and an electron capture detector ( $\mu$ ECD). One microlitre of eluate was injected in splitless mode. Helium was the carrier gas at a constant flow rate of 1 ml/min. The injector temperature was 250°C. The oven temperature was programmed as follows: 65°C held for 1 min, 130°C at 10°C/min and held for 1 min, and 300°C at 5°C/min held for 10 min.

The PAHs in the final eluate were analyzed by an Agilent 7890 gas chromatography equipped with an HP-5 capillary column (30 m 0.32 mm 0.25 mm) and a selective detector tandem MS/MS (Waters-Micromass Quattro Micro). One microlitre of eluate was injected in splitless mode. Helium was the carrier gas at a constant flow rate of 1 ml/min. The injector temperature was 250°C. The oven temperature was programmed as follows: 65°C held for 1 min, 130°C at 10°C/min and held for 1 min, and 300°C at 5°C/min held for 10 min. Mass spectrometer conditions were as follows: ionization mode at EI (70 eV), interface temperature at 280 °C, ion source temperature at 180°C, and quadrupole temperature at 150°C. The detector was set to Selective Ion Monitoring mode
