

Table S6: Summary of ONEWAY ANOVA post-hoc tests of microbial communities from coupons grouped according to type of fuel in reactors. R7, R8: no-fuel. R1, R2: petro F76. R3, R4: FT-F76. R5, R6: fuel mix. Dependent variables: relative abundance of the 100 genera in highest relative abundance. Mean: mean value. Post-hoc test: significance level < 0.05%, Tukey HSD (2-sided) where no-fuel is the control group. Homogeneous groups are designated by the same letters (A, B). Only taxa with significance level < 0.05% are shown.
