

Table S7: Summary of ONEWAY ANOVA post-hoc tests of microbial communities from coupons grouped according to whether or not they showed pitting corrosion. No pits: R7, R8 (no-fuel), R1, R2 (petro-F76). Pits: R3, R4 (FT-F76), R5, R6 (fuel mix). Dependent variables: relative abundance of the 100 genera in highest relative abundance. Mean: mean value of relative abundance, expressed as a percentage. Only taxa with significance level < 0.05% are shown.

Class: genus (or other taxon)	F _(1, 21)	Sig.	No pits	Pits
			Mean	Mean
Acteothermia: <i>Acetothermiia</i>	8.672	0.008	0.39	0.05
Acidimicrobia: Actinomarinales	7.000	0.015	0.04	0.14
Desulfobacteria: <i>Desulfosarcina</i>	4.574	0.044	0.03	0.42
Desulfobulbia: <i>Desulfotalea</i>	4.597	0.044	1.12	3.25
Desulfovibrionia: <i>Desulfovibrio</i>	6.892	0.016	49.95	27.67
Bacilli: <i>Acholeplasma</i>	8.439	0.008	0.04	0.14
Gracilibacteria: Absconditabacteriales (SR1)	4.477	0.046	0.23	0.01
