

## *Base de datos de las placas de asteroides*

Base de datos de las placas de asteroides tomadas con el telescopio Astrográfico del Observatorio Astronómico de La Plata. Tamaño: 16 x 16 cm (2 grados x 2 grados).

Autores: Romina P. Di Sisto y Rosa B. Orellana. Realizada en el año 2000.

### Información en cada campo

<b>CAJA</b>	número de la caja.
<b>FECHA</b>	fecha de observación de cada imagen.
<b>CUAD</b>	número de cuaderno en que se encuentra asentada la observación.
<b>NP</b>	número de la placa en cada caja.
<b>ASTN</b>	número del asteroide.
<b>ASTNOMBRE</b>	nombre del asteroide
<b>ARH</b>	horas de ascensión recta del centro de placa para 1950.0.
<b>ARM</b>	minutos de ascensión recta del centro de placa para 1950.0.
<b>DECG</b>	grados de declinación del centro de placa para 1950.0.
<b>DECM</b>	minutos de declinación del centro de placa para 1950.0.
<b>N</b>	número de exposiciones en la placa.
<b>TE</b>	tiempo de exposición, en minutos (asteroides).
<b>EMUL</b>	tipo de emulsión de la placa.
<b>ESTPLACA</b>	calidad de la imagen y estado de la placa, para lo cual se han utilizado las siguientes abreviaturas:  MB: la calidad de la imagen y el estado de la placa son muy buenos, no se observan manchas ni deterioro.  MB-B: la calidad de la imagen es muy buena pero algo deteriorada por el tiempo (algo amarillenta) y/o aparecen pocas manchas y pelusas.  B: la calidad de la imagen es buena debido al deterioro (amarillenta) o a que está subexpuesta, y/o la placa tiene varias manchas y pelusas.  B-R: se distinguen las estrellas pero se superponen a la imagen abundantes manchas y pelusas.  R: las imágenes se distinguen poco debido a las abundantes manchas y pelusas.  R-M: La placa está totalmente manchada y las imágenes casi no se distinguen.

Las placas que corresponderían a "M" están en muy mal estado y por lo tanto no se clasifican. Además se agrega si la placa está rota, tiene la emulsión despegada, o si la imagen ha sido sacada en media placa, Norte o Sur.
