SUMMARY. The aim of the present study is to prepare bilayered floating tablets of diltiazem with different ratios of polymers like HPMC K4M, carbopol 934 P, sodium alginate, *Plantago ovata* seed husk (psyllium) and to carry out evaluation of the physicochemical parameters of tablets like hardness, friability, content uniformity, weight variation, *in vitro* buoyancy and *in vitro* dissolution profiles. *In vivo* X-ray study was done in human volunteers to determine the floating characteristics of the placebo tablets for a period of 12 h.

KEY WORDS: Bilayered, Diltiazem, Floating, Friability
