***Liolaemus pseudoanomalus*, A Substitute Name for
Liolaemus marmoratus (Burmeister 1861)**

Recent studies of the South American iguanid lizard genus *Ctenoblepharis* Tschudi 1845 have led to the conclusion that the ten species formerly referred to this genus probably form an artificial assemblage (Cei 1979a, 1979b, 1980). As a result *Ctenoblepharis* has been restricted to four species (*adspersus*, *nigriceps*, *reichei*, *stolzmanni*) from coastal Peru southward to the Atacama Plateau of Chile, and the six remaining species (*anomalus*, *donosobarrios*, *jamesi*, *marmoratus*, *rabinoi*, *schmidti*) from northern Chile and central and western Argentina have been placed in the genus *Liolaemus* Wiegmann 1835 (Cei 1979b, 1980). One of the latter forms was originally described as *Leiosaurus marmoratus* Burmeister 1861, and later referred by Muller (1928) to the genus *Phrynosaura* Werner 1907. Subsequently *Phrynosaura* was synonymized with *Ctenoblepharis* by Donoso-Barros (1971). With the allocation of this species of *Liolaemus* (Cei 1979b, 1980), *Liolaemus marmoratus* (Burmeister 1861) becomes a junior secondary homonym of *Liolaemus marmoratus* Gravenhorst 1838, a synonym of *Liolaemus nitidus* Wiegmann 1835 according to Boulenger (1885) and Peters and Donoso-Barros (1970). Accordingly, in the absence of any available junior synonym and in conformance with Art. 53 of the International Code of Zoological Nomenclature, the name *Liolaemus pseudoanomalus* is here proposed as a substitute name for

Liolaemus marmoratus (Burmeister 1861). This name alludes to the form's apparent affinity with the sympatric species *Liolaemus anomalus* Koslowsky 1895. The nomenclatorial history of the species is as follows:

1861 *Leiosaurus marmoratus* Burmeister, Reise durch die La Plata Staaten, 2:524.

1928 *Phrynosaura marmorata* Muller, Zool. Anz., 77:63.

1971 *Ctenoblepharis marmoratus* Donoso-Barros, Herpetol. Review, 3:85.

1980 *Liolaemus marmoratus* Cei, J. Herpetol., 14:192.

I wish to acknowledge with thanks Richard Etheridge, San Diego State University, for his personal interest and criticism during my taxonomic studies of this difficult group of lizards.
