

THE SPECTRUM OF HR 2902 IN 1961

Carlos Jaschek and Mercedes Jaschek
(Observatorio Astronómico, La Plata)

An account is given of the changes observed in this star in the past. The most remarkable change discovered in 1961 was the disappearance of the FeII emissions, whilst those of [Fe II] remained strong.

The complete paper will be published in the "Publications of the Astronomical Society of the Pacific".
