

SOUTHERN EARLY B-TYPE STARS WITH H α EMISSION

Carlos Jaschek, Mercedes Jaschek and Boris Kucewicz
(Observatorio Astronómico, La Plata)

The complete results of a survey of southern B0-B5 stars, brighter than 6^m5 are presented. An account is given of the changes observed in some of the stars, based upon the spectra taken in the last decade at the La Plata and Córdoba Observatories.

The complete paper will be published in the "Zeitschrift für Astrophysik".
